Colophon

In the event of any discrepancy between the Dutch and the English version of this document, the Dutch version prevails.

This page explains how the texts and images on basdekort.nl come about, and what role AI plays in that.

Texts

The content is mine: what I think, what I've run into and what I want to say. I write it down as shorthand, loose notes in my own words.

Claude, a language model by Anthropic, turns that into running text. Fixed rules apply: follow my style rules, use only the content I supply, and make nothing up. If Claude spots a mistake or a gap in what I write, it may correct me, but only with a source I can check.

After that I have AI read the text critically once more, as a second reader on facts and sources. I weigh what comes out of that myself; I don't adopt nearly all of it.

Those rules are an instruction, not a guarantee. Even a language model with clear instructions can make something up. That's why I review every text on substance and open every source myself before anything goes online. Everything on this site appears under my name, and I am responsible for it.

Run my texts through an AI detector and it may say they were written with AI. That's right, too: the sentences come from Claude. What they say, the views and the experiences, comes from me.

Images

The covers of my articles are made with AI. At the bottom right of every cover it says "Image generated with AI", the overview cards say "AI image" in the corner of the image, and the page's structured data says so too.

v1.0 · November 15, 2026

The images of my projects are not made with AI; they are screenshots and renders of the work itself.
